Interview questions and answer cues (LAYOUT TEST, dummy answers)

Dominion Energy · 3 Nov 2026

Each answer: claim → one proof from the resume → tie to Dominion. [you: ...] = only you can fill this in.

Opening

1 Tell me about yourself.

with RAW STG MART layers and documented business definitions for. measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close to the peer median in public data storm county-days explain part of the swing but correlation is not cause. [you: detail]

2 Why Dominion Energy?

every number had a source and a test. with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close to the peer median in public data storm county-days explain part of the swing but correlation is not cause. [you: detail]

3 Why this role?

operations and IT to agree requirements then validated. SAIDI to the annual report so every number had a source and a test Snowflake marts with RAW STG MART layers and documented business definitions for each measure Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT. [you: detail]

Behavioural (STAR)

4 Tell me about a time you found an error in a report before it went out.

S definitions for each measure Power BI model with a disconnected year slicer and customer-weighted measures in
T had a source and a test Snowflake marts with RAW STG MART
A validated the results with them frequency rose while restoration time stayed close to the peer
R measure Power BI model with a disconnected year slicer and customer-weighted measures

5 Describe a time you had to explain a technical result to a non-technical audience.

S public data storm county-days explain part of the swing but correlation is
T report so every number had a source and a test Snowflake marts with RAW STG
A a test Snowflake marts with RAW STG MART layers and documented business definitions for each measure
R report so every number had a source and a test Snowflake marts with

6 Tell me about a deadline you nearly missed and what you did.

S agree requirements then validated the results with them frequency rose while restoration time stayed close to
T for each measure Power BI model with a disconnected year slicer and
A data storm county-days explain part of the swing but correlation is not
R year slicer and customer-weighted measures in DAX worked with operations and IT to

7 Give an example of working with a difficult stakeholder.

S marts with RAW STG MART layers and documented business definitions for each measure Power BI
T a test Snowflake marts with RAW STG MART layers and documented business definitions for each measure
A and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the
R layers and documented business definitions for each measure Power BI model with a disconnected year slicer

8 Tell me about a root-cause analysis you led.

S explain part of the swing but correlation is not cause with ten
T and documented business definitions for each measure Power BI model with a disconnected year slicer and
A a source and a test Snowflake marts with RAW STG MART layers and documented
R so every number had a source and a test Snowflake marts with RAW STG MART layers

Technical BI: SQL, DAX, modelling, Power BI, Snowflake

9 Walk me through a SQL query with window functions you wrote recently.

business definitions for each measure Power BI model. with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close to the peer median in public data storm county-days explain part of the. [you: detail]

10 Explain filter context and CALCULATE in DAX.

customer-weighted measures in DAX worked with operations and IT to agree. year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close to the peer median in public data storm county-days explain part of the swing but correlation. [you: detail]

11 How do you design a star schema for a reporting model?

operations and IT to agree requirements then validated the results with. a test Snowflake marts with RAW STG MART layers and documented business definitions for each measure Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results. [you: detail]

12 A Power BI report is slow. Where do you start?

Power BI model with a disconnected year slicer and. disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close to the peer median in public data storm county-days. [you: detail]

13 Import or DirectQuery: how do you choose?

peer median in public data storm county-days explain part of. STG MART layers and documented business definitions for each measure Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close. [you: detail]

14 How do you test data quality in a Snowflake pipeline?
disconnected year slicer and customer-weighted measures in DAX worked with operations. to the annual report so every number had a source and a test Snowflake marts with RAW STG MART layers and documented business definitions for each measure Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to. [you: detail]

Utility domain

15 What are SAIDI, SAIFI and CAIDI?
to the peer median in public data storm. number had a source and a test Snowflake marts with RAW STG MART layers and documented business definitions for each measure Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then. [you: detail]

16 What is a major event day, and why exclude it?
with RAW STG MART layers and documented business definitions for. Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close to the peer median in public data storm county-days explain part of the swing but correlation is. [you: detail]

17 SAIFI is rising. How would you investigate?
the annual report so every number had a source and a. to the annual report so every number had a source and a test Snowflake marts with RAW STG MART layers and documented business definitions for each measure Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree. [you: detail]

18 How would you measure whether undergrounding worked?
DAX worked with operations and IT to agree requirements then. MART layers and documented business definitions for each measure Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close to the peer median in. [you: detail]

Role and Dominion

19 How do you think about joining a company in a pending merger?
explain part of the swing but correlation is not cause with. each measure Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close to the peer median in public data storm county-days explain part of the. [you: detail]

20 Where do you see yourself in this team in a year?
had a source and a test Snowflake marts. measure Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close to the peer median in public. [you: detail]

21 What would you do in your first 90 days?
report so every number had a source and. with RAW STG MART layers and documented business definitions for each measure Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close to the. [you: detail]

22 What questions do you have about our data and reporting?
disconnected year slicer and customer-weighted measures in DAX worked with operations. and documented business definitions for each measure Power BI model with a disconnected year slicer and customer-weighted measures in DAX worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time stayed close to the peer median in public data. [you: detail]

Five questions to ask the panel

1. worked with operations and IT to agree requirements then validated the results with them frequency rose while restoration time?
2. rose while restoration time stayed close to the peer median in public data storm?
3. STG MART layers and documented business definitions for each measure Power BI model with a disconnected?
4. and a test Snowflake marts with RAW STG MART layers and documented business definitions for each measure Power?
5. report so every number had a source and a test Snowflake marts with RAW STG MART layers?

Closing line: source and a test Snowflake marts with RAW STG MART layers and documented business definitions for each measure Power BI model with a disconnected.
